### DETAILED ACTION

#### *Election/Restrictions*

1. During an interview with Michael Monaco on 1-10-2007. Applicant expressly invoked 35 USC 112 6<sup>th</sup> paragraph. As a result, claim 35 is linked to claim 33, which was already linked to claim 1. Claim 35 and its dependents are therefore rejoined. As a result, all pending claims are now rejoined and will be prosecuted on the merits.

### EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Monaco on 1-11-2007.

#### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3663

4. Claim 36 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 36 recites limitations which lack antecedent basis. It appears that claim 36 is supposed to be dependent on claim 35 not 34, and will be examined as such.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 33, 35 and 37-41 rejected under 35 U.S.C. 102(b) as being anticipated by Gerrish et al. (USP No. 2001/0040720).

- Regarding claims 1, 33 and 35, Gerrish discloses an optical amplifier connected to an optical transmission line, comprising:
  - means for detecting an optical input and output power of said optical amplifier; [¶ 0021] [Equation 2]
  - means for obtaining a difference between a measured gain of said optical amplifier and a target gain based on the detected optical input and output power to produce an error signal; [Equation 2] [ $e(t)$ ]

Art Unit: 3663

- means for applying said error signal to each of a proportional calculation and an integral calculation to create respective proportional  $[e(t)]$  and integral control signals  $[e(\tau)]$ ; [Equation 1]
  - means for adding the proportional and integral control signals to create a drive current of at least one pump laser diode provided in said optical amplifier;  $[u(t)]$  [Equation 1]
  - means for controlling the gain of said optical amplifier with the drive current; and [¶ 0023]
  - means for adjusting a control parameter of the proportional calculator in response to the detected optical input power.  $[u(t)]$  is a function of input power as a function of time, and therefore performs PI control on the fly]
- Regarding claims 39-41, Gerrish discloses  $u(t) \propto e(t) \propto P_{in}(t)$  in equations 1 & 2.
  - Regarding claim 37, Gerrish discloses the use of his amplifier in WDM networks in [¶ 0003].
  - Regarding claim 38, Gerrish discloses the use of his amplifier in WDM networks in [¶ 0003]. A second optical source and a multiplexer are inherent to a WDM (Wavelength Division Multiplexed) network.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3663

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claims 4, 34 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gerrish as applied to claims 1, 33, 35 and 39-41 above, and further in view of Ye (USP No. 6414788). Gerrish discloses the invention with all the limitations of claims 1, 33 and 36, but fails to disclose adjusting control parameters in response to an add/drop transient event. Ye teaches a PID controller that can handle add/drop events. [Fig. 1]

Art Unit: 3663

[Cols. 4-6]. Therefore, it would have been obvious to one skilled in the art (e.g. an optical engineer) at the time the invention was made, to use modify the invention of Gerrish, with the control mechanisms of Ye, for the advantage of making a more adaptable optical amplifier.

### ***Conclusion***

11. While patent drawings are not drawn to scale, relationships clearly shown in the drawings of a reference patent cannot be disregarded in determining the patentability of claims. See In re Mraz, 59 CCPA 866, 455 F.2d 1069, 173 USPQ 25 (1972).

12. The references made herein are done so for the convenience of the applicant. They are in no way intended to be limiting. The prior art should be considered in its entirety.

13. The prior art which is cited but not relied upon is considered pertinent to applicant's disclosure.

14. As to limitations which are considered to be inherent in a reference, note the case law of In re Ludtke, 169 U.S.P.Q. 563; In re Swinehart, 169 U.S.P.Q. 226; In re Fitzgerald, 205 U.S.P.Q. 594; In re Best et al, 195 U.S.P.Q. 430; and In re Brown, 173 U.S.P.Q. 685, 688.
